

# REALITY solutions

## Creating long lasting relationships

Focusing on Support Services, Effective Software Solutions, Robust IT Infrastructure, and Innovative Marketing updates to transform our customers experience with market leading software and services.

### Sage 200 Project

#### Background:

OSL Consulting are an organisation which specialises in Engineering Consultancy and Project Management for the Oil and Gas Industry.

OSL Consulting were using Sage 50 Accounts & Sage Job Costing before moving across to their current Sage 200 Solution with Reality Solutions Limited.

The organisation required a software solution which would allow them to combine the two uses of Sage 50 Accounts and Sage Job Costing into one solution. The Sage 200 software solution could provide all of the organisations desirable features.

Step 1:  
Project Scoping,  
Onboarding &  
Planning.

Step 2:  
Implementation  
and System  
Customisations

Step 3:  
Onsite Go-Live  
assistance,  
Training & Support

“ Sage 200 is a brilliant product for our company, it has provided us with the capability to invoice our customers through the project accounting function as well as processing our accounts ”  
OSL Consulting Limited

“ Migration was very easy, I worked with the Sage team at Reality to plan a suitable timescale. ”

OSL Consulting Limited

Have you received any help or support since the initial implementation?

We required some initial support from Adrian to help us set up the project accounting function. He worked with us to enable us to import our Engineers timesheets directly from our Timesheet Portal into Sage via a csv file. Since then we have also had Adrian's support with other functions of Sage 200 that we have been unsure of their functionality, such as the setting up and processing of Euro and Dollar bank accounts.

What results have you seen since implementing our product/solution?

Before moving to Sage 200, we had to enter all our Engineers timesheets manually into Sage Job Costing, this was not only very time consuming but was also open to manual error. Sage 200 has taken this problem away by us being able to upload timesheets from a csv file straight into the software.

What is your favourite part or the Sage 200 Solution?

The main advantage we have gained from using Sage 200 is the Project Accounting function. Company's such as ours who invoice our customers for our Engineers time means we can generate all our sales invoices through this function.
